

Triton Employee Monitoring

Monitor remote employees' web and desktop application usage.

Monitor web and desktop application use across all company computers – whether in-network or remote. Balanced to provide oversight without extensive policy documentation, Triton is a smart fit for businesses wanting visibility without heavy-handed intrusion.

Respectful and non-intrusive visibility into workforce productivity

Monitors active and idle time and toggling between browser windows and desktop apps

Works at the device level – inside or outside a company network

Captures active web and application use down to a 5-second margin of error

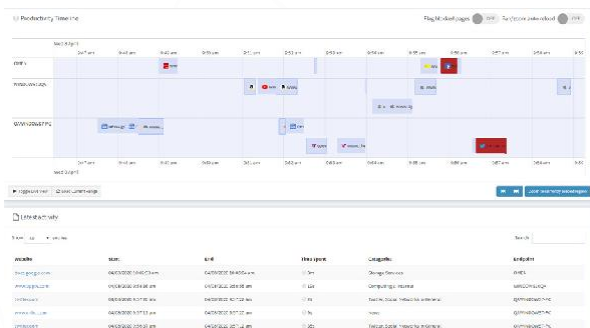

Stores up to 6 months of data for auditing purposes

Compatible with all modern web browsers

With Triton you can:

Monitor all employee desktop apps and web use whether in-network or remote

Visibility Into workforce productivity without the hassle of looking over each employee's shoulder

Track back to events like malware injections using the timeline

Monitor activity and view robust reports to identify productivity trends and optimize workflow

Determine which web-based applications are providing the most business value
